Lab Write Up: Title

1) Objective: *May be a statement or a question regarding the purpose of the lab activity.*

2) Data/Observations: (see attached) *This information should be your observations/drawings/measurements from your class investigation. This information should not be typed, but should be clearly written and easily read. Details are important.*

3) Analysis/Questions *This is where you should answer all the questions I list at the end of each lab procedure or on the board at the end of lab. Any graphs or charts you have been asked to draw should be listed in this section. You may also list questions this lab may have inspired you to ask!*

4) Conclusion/Discussion *This is where you should discuss/explain how the objective/question was achieved/answered. How would you change your experiment to better answer your question? What part of the procedure might have been a source for experimental error? Do you have additional questions that your experiment didn't answer?*

All lab write-ups must be typed, with correct spelling and proper sentence structure.
